COURSE DESCRIPTION

Many degrees in Veterinary Sciences are designed to prepare you for a specific career path—either as a veterinary doctor or as a field researcher. At the same time, various transferable skills should be learned which will serve you well beyond the clinic or laboratory—including soft skills needed to deal with upset owners, teamwork skills (vets working with a support staff team), and learning how to work with the advanced technology used in modern practices and research facilities.

Unlike human medical care, veterinary science is competitive and challenging but also highly respected; it offers social status bonuses, desirable employability, income opportunities, and, of course, the pleasure of contributing to the quality of life of animals.

If you're studying veterinary science, you'll discuss many of the same subjects addressed in a medical degree but focus on animals rather than humans. Anatomy, animal behaviour, animal husbandry, cell biology, nutrition, physiology, genetics, epidemiology, pharmacology, infectious diseases, pathology, parasitology, and public health may be included in the course.

You can also study veterinary science modules, which are less rigorous but are all part of veterinary career training and include communication skills, law and ethics, business management, and others.
